

January, 2011

To whom it may concern,

The scents used to make Smencils and Smens are the same as those used to make products like soaps and lip gloss and are safe for reasonable personal use as tested by the manufacturers.

While the scents are hypoallergenic, non-toxic, and generally regarded as safe, the manufacturers cannot claim with 100% certainty that absolutely no one will have some kind of sensitivity to them.

Additionally, there is no lead in the "leads" of pencils. The writing cores are a compound of graphite and clay.

The erasers are made from a latex-free synthetic rubber compound.

Our products have been tested extensively and have passed all standards of ASTM D-4236 and EN-71.

If you require any further information or have any other questions, please feel free to contact us.
